PROTECT WATER LINES FROM FREEZING

The following actions should be considered to protect your water lines:

- Repair broken windows and ensure windows/vents are closed during the winter.
- Insulate water pipes in unheated areas, including crawl spaces.
- For sinks located against a non-insulated outside wall:
 - Open the vanity door to allow warm air to reach the water pipes.
 - A light bulb placed near the water pipe may generate enough heat to keep the water flowing.
 - Heat tape wrapped around the pipe may keep the pipe from freezing.
- Residents of mobile homes should check the condition of the heat tape on their water service and water meter.
- Protect unheated indoor water meter with an insulated box and water pipes should be wrapped in insulation using heat tape.
- Outside water taps and underground sprinkler systems should have the water supply shut off inside the house at the isolation valve for the tap.
- Sprinkler lines and taps should be drained/blown out.
- A thin stream of water (as thick as a pencil lead) running continuously from at least one tap will help prevent a frozen water service.
- If you plan to be away from home over the winter period, close the main water isolation valve located next to the water meter in your home. You should leave the heat on in your home and have someone check inside your home daily while you're away.

A frozen water service, or a burst water pipe, is an inconvenience and expense that most people would like to avoid. Please take all possible precautions to prevent this happening in your home or business.
