## PROTECT WATER LINES FROM FREEZING

To protect your water lines against the possibility of freezing this winter, consider the following actions:

- Repair broken windows and ensure windows and vents are closed during the winter.
- Insulate water pipes in unheated areas of your home or business, including crawl spaces.
- If a sink is located against an uninsulated outside wall, consider opening the vanity door to allow warm air to reach the water pipes. A light bulb placed near the water pipe may generate enough heat to keep the water flowing. Similarly a heat tape wrapped around the pipe may keep the pipe from freezing.

Residents of mobile homes should check the condition of the heat tape on their water service and water meter. An unheated indoor water meter should be protected with an insulated box and water pipes should be wrapped in insulation and heat tape.

Outside water taps and underground sprinkler systems should have their water supply shut off inside the house at the isolation valve for the tap and sprinkler line. Lines should be drained/blown out.

- A very thin stream of water (as thick as a pencil lead) running continuously from at least one tap will help prevent a frozen water service.
- If you plan to be away from home over the winter period, close the main water isolation valve in your home. This is located next to your water meter.

A frozen water service, or a burst water pipe, is an inconvenience and expense that most people would like to avoid. Please take precautions to prevent this inconvenience in your home or business.
