Economists track month-over-month inflation and assess the outlook in the broad categories of food, shelter, goods and services, and core inflation. Food and shelter account for roughly half of the inflation basket for Canadians who have been struggling with the cost of living, slower price growth means inflation may be easing for a while now. But as base year effects continue to dissipate, price pressures have relented, giving glimmers of hope that inflation may be more contained. Economists tracking month-over-month inflation may see some base year effects, that may cause the annual inflation rate to fall in the first half of 2023, but the current inflation rate is still expected to be above 5% for the year.
