

# Campground Methodology

---

2022 Assessment Year

ASSESSMENT DEPARTMENT  
February 2023

## Scope Statement

---

This document is intended to be an introduction to the valuation process used to determine assessed values for campground properties in the City of Medicine Hat. For more detail regarding to a specific property, the property owner may contact an assessor with the City of Medicine Hat at 403-529-8114. Alternatively, the property owner can visit the website, [www.medicinehat.ca/assessmentforms](http://www.medicinehat.ca/assessmentforms) to complete an *MGA s.299 or 300* request for more information and/or a Letter of Authorization form.

Property assessments in the City of Medicine Hat reflect the market value of the fee simple estate for property as of July 1, 2022 (reflecting the condition and characteristics of the property as of December 31, 2022) as required by the *Municipal Government Act* as enacted by the Government of Alberta.

For this purpose, market value is defined by the *Municipal Government Act*:

*1(n) "market value" means the amount that a property, as defined in section 284(1)(r), might be expected to realize if it is sold on the open market by a willing seller to a willing buyer;*

Market value, as defined by the Appraisal Institute of Canada and as detailed in the Canadian Uniform Standards of Professional Appraisal Practice as:

*The most probable price, as of a specified date, in terms of cash, or in terms equivalent to cash, or in other precisely revealed terms, for which the specified property rights should sell after reasonable exposure in a competitive market under all conditions requisite to a fair sale, with the buyer and seller each acting prudently, knowledgeably, and for self-interest, and assuming that neither is under undue duress.<sup>1</sup>*

Market value, is also defined by the International Association of Assessing Officers (IAAO) as:

*The most probable price (in terms of money) which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby: The buyer and seller are typically motivated. Both parties are well informed or well advised, and acting in what they consider their best interests. A reasonable time is allowed for exposure in the open market. Payment is made in terms of cash or in terms of financial arrangements comparable thereto. The price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.<sup>2</sup>*

<sup>2</sup> IAAO. *Glossary for Property Appraisal and Assessment*. 2<sup>nd</sup> Edition. Page 101.

The fee simple ownership is the most complete form of ownership. The Courts and the IAAO define it as:

*Fee simple title indicates ownership that is absolute and subject to no limitation other than eminent domain, police power, escheat, and taxation.*<sup>3</sup>

The Appraisal Institute of Canada has similar definitions.

Campground properties in the city are primarily valued using the income approach to value. This valuation approach capitalizes a property's stabilized, market typical, net operating income to come up with an estimate of market value. The valuation formula for properties assessed using the income approach is:

$$\text{Market Value} = \frac{\text{Net Operating Income}}{\text{Overall Capitalization Rate}}$$

# Mass Appraisal

---

Primarily, property assessment establishes the base for fair and equitable distribution of the tax burden. The individual assessments determine each property's share of the tax base.

The Alberta assessment and taxation system is based on the laws outlined in the *Municipal Government Act*, RSA 2000, Chapter M-26 [MGA], and all associated regulations, including, for example, *Matters Relating to Assessment and Taxation Regulation*, Alberta Regulation 203/2017 [MRAT].

Valuation procedures have been developed to enable assessors to prepare *market value* assessments, reflecting typical market conditions and bearing equitable relationships between similar properties. These procedures are encompassed in the practice of *mass appraisal*. The *Municipal Government Act* directs assessors to apply the valuation standards in a fair and equitable manner; the *Matters Relating to Assessment and Taxation Regulation* states that property assessments are to be prepared using *mass appraisal* to predict accurate and equitable market values.

A property assessment is:

- An estimate of the property's market value on July 1, of the assessment year;
- Prepared using mass appraisal;
- An estimate of the value of the fee simple estate in the property;
- A reflection of the property's condition on December 31, of the assessment year;
- Prepared assuming typical market conditions, reasonable market exposure, a willing and knowledgeable seller to a willing and knowledgeable buyer.

Mass appraisal requires that:

- Properties are stratified into groups of comparable properties;
- Common property data be identified in each group;
- A uniform valuation method utilizing typical market information determined for each group will be applied to the characteristics of each property;
- Statistical testing must be performed to confirm quality control.

## Campgrounds

---

Many campgrounds have sites with facilities such as fire rings, barbecue grills, utilities, shared bathrooms, and laundry, as well as access to nearby recreational facilities, but not all campsites have similar levels of development. Campsites can range from a patch of dirt to a level, paved pad with sewer, water and electricity. Income streams may correlate with the amenities offered at each site, the quantity of sites, length of season, etc. As the level of services, number of sites, and length of season increase income stream may also.

## Income Approach to Value

---

Campgrounds generate rental income considered by investors as part of their decision-making process in purchasing a property and the price they are willing to pay for the property. A typical income stream generated by a property is utilized to calculate the market value of a campground via the income approach given market conditions such as vacancy and expenses; capturing the value of the property based on its typical income generating potential.

## Income Approach Method

---

The direct capitalization method is the valuation technique most commonly used by appraisal practitioners across Canada for valuing income-producing properties. Direct capitalization converts or capitalizes the expected level of current net earnings into an estimate of market value using a capitalization rate. In its most basic form, the direct capitalization method is an elementary mathematical ratio involving the estimation of current net operating income (NOI), which is then “capitalized” to produce an estimate of current market value.

**Potential Gross Income (PGI)** - Typical rent is multiplied by the area(s) assessed, with the sum of all these amounts equaling the potential gross operating income.

**Vacancy Allowance (Vac)** – Typical percentage of unoccupied space for the property type.

**Effective Gross Income (EGI)** – The typical vacancy allowance deducted from the potential gross income.

**Expense Ratio** – Typical costs necessary to maintain the properties income stream. May include advertising, property taxes, property insurance, and management fees.

**Non-Recoverable Allowance** – Typical deduction from effective gross income for expenses incurred solely by the property owner.

**Reserves for Replacement** – Also called structural allowance. Typical amount set aside by the property for the replacement of capital items.

**Net Operating Income (NOI)** – The balance remaining after subtracting all expenses from effective gross income.

**Capitalization Rate** – The overall capitalization rate should capture the return on and return of the investment. The indicated capitalization rate for sold properties is established using the following formula:

$$\text{Overall Capitalization Rate} = \frac{\text{Net Operating Income}}{\text{Adjusted Sale Price}}$$

Capitalization rates are a tool used in appraisal theory to convert income into an expression of value. According to appraisal theory, overall capitalization rates fundamentally reflect the following factors:

- The degree of perceived risk
- Market expectations regarding future inflation
- The prospective rates of return for alternative investments
- The rates of return earned by comparable properties in the past
- The prevailing tax laws

# Assessed Valuation Rate Ranges

---

## Rental Site Rates

The data obtained from the Request for Information forms sent to campground property owners was analyzed to determine typical market rent rates. Market rates per site range depending on the type of site as shown in the table below:

Type of Sites	Rate Ranges	
	Min.	Max.
Full Service	\$ 26.00	\$ 48.00
Power & Water	\$ 24.00	\$ 42.00
Power Only	\$ 22.00	\$ 39.00
No Services	\$ 20.00	\$ 28.00
Overflow	\$ 18.00	\$ 18.00
Motorbike	\$ 20.00	\$ 20.00

## Vacancy Rates

Vacancy rates and collection losses were established by analyzing and amalgamating information received from the Request for Information form sent to campground property owners. A typical rate of 80% was the derived from the market and applied as typical vacancy for all assessed properties.

## Expense Rates

Typical expense rates were derived from the market information provided by property owners and applied to each property based on the quality of the income stream. Typical expense rate is 55%.

## Capitalization Rates

The capitalization rate applied to campground properties ranges from 10.75% to 11.25% based on the quality of the income stream.
