

Spring into Energy Savings

with tips from

A City of Medicine Hat Environmental Initiative

- ❁ Change the direction of airflow with your ceiling fan to draw air upwards and cool the room.
- ❁ Make sure your spring cleaning includes dusting your refrigerator's condenser coils. Built up dust and hair makes the motor work harder, using more electricity.
- ❁ Keep the heat out of your kitchen by grilling outdoors on warmer spring days.
- ❁ Avoid placing heat generating appliances by your thermostat – it senses heat and can cause your air conditioner to run longer than necessary.
- ❁ Hang clothes to dry on a clothes line outside instead of running your dryer.
