Policy Statement

Clause 1.
Any facility under the jurisdiction of the City of Medicine Hat Water Bylaw 2379 which has any cross connection hazard listed as "severe" in Canadian Standards Association Manual B64.10 shall have a CSA approved testable back flow prevention device installed at the water service entrance into the facility in addition to any other back flow prevention device required under any other Act, code or regulation.

Clause 2.
Any facility under the jurisdiction of the City of Medicine Hat Water Bylaw 2379 which has any cross connection hazard listed as "moderate" in Canadian Standards Association Manual B64.10 shall be required to have a testable back flow prevention device installed at the water service entrance into the facility in addition to any other back flow prevention device required under any other Act, code or regulation if an authorized City of Medicine Hat Cross Connection Control Officer determines that such a device is necessary to protect the City of Medicine Hat public water system.

Clause 3.
Any facility under the jurisdiction of the City of Medicine Hat Water Bylaw 2379 which cannot be fully inspected to ensure that all appliances connected in any way to the public water system internal plumbing system are categorized for hazard severity shall be categorized as a "severe" for the purpose of Clause 1 above.

Authorization:
I hereby direct the implementation of this policy in accordance with the authority provided in City of Medicine Hat Water Bylaw 2379 Clause 28.
